EDUCATION

Jaypee Institute of Information Technology

Bachelor of Technology in Computer Science

Noida, UP

July 2024 – May 2029

Mercy Memorial School

10th - 94.2% , 12th - 94.33% (Perfect 100 in CSE)

Kanpur, UP

April 2010 – May 2024

PROJECTS

Tradeky | Founder & Lead Software Engineer | [Live at tradeky.in](https://tradeky.in)

January 2025 – Present

- Engineered a concurrent execution backend utilizing FastAPI and the AngelOne API, automating real-time order routing and multi-account state synchronization with sub-50ms execution targets.
- Architected an NLP-to-code translation engine, programmatically compiling unstructured plain-English inputs into executable Python trading algorithms, reducing manual backtesting setup time by 90% while generating quantitative risk profiles.
- Developed a dual-state deployment environment supporting simultaneous, multi-threaded bot execution across 10+ distributed client profiles for both zero-risk simulated trading and live-market interaction.

Regulon | TypeScript, Express, Supabase, Deno, OpenAI API, TanStack Query

March 2026 – Present

- Constructed a multi-tenant SPA (React/TypeScript) managing secure workflows across 5 distinct user personas, utilizing TanStack Query for asynchronous state management and strict role-based access control.
- Developed data-extraction pipelines utilizing Node.js and Cheerio, orchestrating 12 cron-scheduled jobs to parse unstructured regulatory updates from 7 government portals with custom retry/backoff logic.
- Architected a distributed backend using Express.js and PostgreSQL (Supabase), configuring 40+ REST API endpoints with hardened security middleware (Helmet, JWT) to ensure zero-leakage processing of sensitive financial records.

Kyte | JavaScript (Node.js), Express, MongoDB, Google Maps API

August 2025 – November 2025

- Built a ride-hailing architecture utilizing custom matching algorithms, managing concurrent fleet inventory and state synchronization for 500+ simulated active nodes.
- Integrated the Google Maps API to process real-time geolocation tracking and route optimization, achieving sub-150ms spatial data querying across a 50-km geofenced radius.

Autonomous UAV Build | Hardware Integration | C-DAC Workshop

October 2025

- Programmed and calibrated flight control systems for an Unmanned Aerial Vehicle (UAV) from scratch, bridging low-level programming with physical, physics-based constraints.
- Integrated sensory hardware components to achieve aerodynamic stability and autonomous maneuverability during an intensive government technical workshop.

HONORS & AWARDS

Top Performer | Execute 25.1 Algorithmic Competition

January 2026

- Secured top-tier ranking by designing optimized data structures, executing complex computational logic, and achieving rapid runtime performance under strict time constraints.

Podium Finish & Cash Prize Winner | Startup Showdown

April 2026

- Awarded highest simulated funding, placing in the top 3 out of 100+ participants for innovation and architecting a scalable technical business model.

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL (PostgreSQL), JavaScript, HTML/CSS

Frameworks & APIs: React, FastAPI, Flask, Node.js, REST APIs, WebSockets

Developer Tools: Git, Google Cloud Platform, AWS, Claude Code

Libraries & AI: Pandas, NumPy, Scikit-learn, yfinance, Large Language Models (LLMs), NLP
